Send a Voice Memo via the Linq Blue Mobile App

Mavilyn Carlos - 2026-07-25 - [Linq Blue](#)

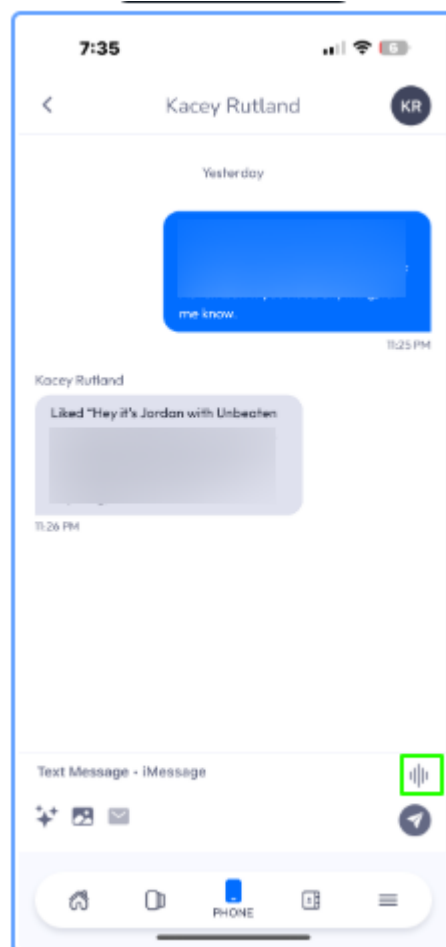

Sometimes it's just easier to say something than to type it all out. With the **Linq Blue mobile app**, you can send a quick voice message directly to your contact: perfect for follow-ups, personal greetings, or urgent replies.

Note: If you don't have the app yet, see [Download and Use the Linq Blue Mobile App](#) to get set up first.

How Do I Send a Voice Memo from the Linq Blue App?

Press and hold the microphone icon in the conversation to record, then release to send.

1. **Open the Linq app.** Tap the **Linq** app on your phone, go to the **Phone** tab at the bottom, and tap on the conversation with the person you want to message.
2. **Tap the microphone icon.** Look just below the message box: the microphone icon is on the right-hand side.

3. **Record your message.** Press and hold the mic icon to start recording. Speak clearly and keep your message short and friendly. For example:

"Hey Alex! Just wanted to say thanks for stopping by today. Let us know if you have any questions about memberships!"

4. **Release to send.** Once you're done, release your finger, and your voice memo will send automatically.

That's it! Your contact will receive your voice message just like a regular text, but in your voice.

Helpful Tips

- **Use voice memos for quick, personal touches:** They're especially handy when you're on the move.
 - **Keep messages under 30 seconds** when possible.
 - **Great for owner check-ins, class updates, or fast replies** without typing.
-

If you have questions about sending voice memos with the Linq Blue mobile app, our Support team is happy to help. Reach us at **hello@usekilo.com**.
