Use An External SEO Service With Kilo

Laura Gibson - 2026-09-21 - [SEO After Switching or Redesigning](#)

Can I keep using an external SEO service?

Yes. Kilo websites are fully compatible with any external SEO service or marketing agency. Our websites are built on WordPress and use tools like **Rank Math** (or **Yoast** on older templates), which support ongoing SEO work, including keyword optimization, content editing, and performance tracking.

If you are working with a local SEO (or general SEO) provider, they can continue their work on your new site without interruption. Their efforts can include improving your visibility on Google Maps, optimizing your Google Business Profile, managing citations, and publishing local content.

If needed, we are happy to coordinate with your SEO provider during or after your website launch to ensure a smooth transition.

Tip: Let your SEO partner know when the new site goes live. They may want to double-check settings and monitor traffic or ranking shifts right after launch.
